

SHADING SOLUTIONS

CONTROL LIGHT AND HEAT WITH QUALITY SHADING SOLUTIONS

Sun and light are great. But there are times when it needs to be controlled to avoid blinding glare, searing heat and soaring HVAC costs in your workspaces and client spaces.

It's not just a matter of putting up a blind and hoping for the best. You need to consider the movement of the sun, outdoor conditions on the day, and maintaining a view of the world outside.

At KODUM we'll help you manage the natural light, heat and UV to create a more comfortable, productive space.

Our solutions are simple to use and come in an exclusive range of fabrics to reduce glare, control ambient temperatures and protect your furnishings from harmful UV radiation.

A SHADING SYSTEM FOR EVERY APPLICATION

Roller Blinds, Blackout/Blockout Blinds, External Screens or Fabrics – we can create a shading system for any space or brief.

Our industry-leading shading utilises the most advanced fabrics available to completely or partially manage light levels and UV. These can be motorised or manually operated. Our motorised solutions use the latest technology for an ultra-quiet operation and can be incorporated into a larger KODUM Integrated Control System.

A QUALITY PARTNERSHIP TO DELIVER OUTSTANDING RESULTS

Controlling the sun isn't easy. It takes a lot of research and the right materials. We work closely with a world leader in shading solutions to deliver a more comfortable workspace.
